Instant Space

When administrators at Alexandria V.A. Hospital in Pineville, LA, were planning for an upgrade of their facilities, the need for sterile and secure, temporary storage space became a top priority. Rather than lease remote space a considerable distance from the hospital, facilities contracting officers reached out to FRG to deploy a **temporary warehouse** solution in an adjacent parking area. The project took just a few months to design, engineer and install and provides flexible durable space in a strategic location that simplified the logistics of their facilities improvements.

FRG Temporary Warehouses are perfect for facilities updates, emergency response, events and hangar/port applications.
